STEP ONE- Registered Labs in the State of Ga.

GDA Approved Laboratories https://agr.georgia.gov/hemp-sampling

This is a link to labs that are registered in the State of Georgia. When you scan the QR code of Hemp products and find the lab results for that specific product brand, flavor, and device make sure that the lab that tested the product is registered with the department. There are 11 labs.

1. ACS Labs
2. Anresco Labs
3. Delta 9 Analytical
4. Eurofins Food Chemistry Testing
5. KCA Labs
6. New Bloom Labs
7. SDPharmLabs LLC
8. SJ Labs and Analytics
9. Trichome Analytical
10. Arcanna Analytics
11. Harrens Lab Inc

NOTE: this list can change, and labs can be added, please check the link.

STEP TWO- Full Panel Lab results

The only other step is to make sure the lab result is a full panel. A full panel test will include the Cannabinoid analysis, Pesticide analysis, Residual solvents, Pathogenic microbiology, microbiology, Heavy Metals, Filth and foreign matter, and Mycotoxins tests. A full panel result is normally a few pages long while a potency test is normally about one page long. (Rule 40-32-5-.02 Total Delta-9 THC Concentration contaminant limits)

Please make sure to double-check your products that you are selling to customers even if your wholesaler, or whomever you are buying from says they are compliant with Georgia law. We want customers to be safe when choosing to consume hemp products, but we cannot assure safety when all parties are not doing their part. We ask that you do your part as a business and check the labs and lab results when purchasing hemp products.
